Northeast Information Systems Declares On-Premise Technology Obsolete

Leading Technology Provider Advises SMBs to Trade-In Their Obsolete Tech for the Latest Advancements

Albany, NY – November 30, 2017 - Northeast Information Systems a leading technology provider, announced today that the company has begun to advise owners of SMBs (small to mid-sized businesses) to trade-in their obsolete tech for the latest advancements in technology. With many companies already shifting the bulk of their infrastructure to a cloud-based IT environment, Northeast Information Systems is preparing their customers for the inevitable future that any on-premise technology is no longer necessary. In stride with companies like Uber, the world's largest taxi company that owns no taxis, or AirBnB, the world's largest hotel company, that owns no hotels, Northeast Information Systems asserts that the most businesses will own no on-premise technology, either.

Historically, business owners would purchase their technology outright, only to eventually be burdened with unforeseen maintenance costs, repair costs or miscellaneous

costs that were not part of the initial purchase, but necessary for scaling. The total cost of ownership of the technology far exceeded the initial purchase price and business owners were left deciding which servers, routers and supplementary purchases they needed to make without the expertise, nor inclination to do so. Furthermore, after a substantial capital expenditure, the underlying technology would reside on-site, eventually becoming obsolete.

In recent years, IT and telephony have evolved to the point where SMBs can completely avoid large capital expenditures on depreciating assets. This is one of the catalyzing reasons behind the explosive interest in cloud-based technology solutions, because once technology is in the cloud and is stored in extremely secure, off-site locations, the business owner doesn't have to waste time evaluating technology investments.

"We're helping more and more businesses transition to cloud-based technology, while enhancing their overall customer experience," stated C.G. Frink,

President of Northeast Information Systems. "Not only does cloud lessen the financial impact of technological obsolescence or unforeseen maintenance/growth costs, but it's a superior ownership experience for everyone in the company."

Employees are continuing to ask employers for more and more remote working agreements, which requires cloud-based, off-site technology, that is constantly managed, monitored, secured and upgraded by a managed IT services provider in order to keep the company secure, while simultaneously offering employees the flexibility to work from anywhere. CFOs are largely in favor of cloud-Cloud Workspace solutions because of the fixed monthly costs. The CFO is never surprised by large capital expenditures or all technology going obsolete simultaneously. True managed IT service providers, like Northeast Information Systems, are constantly upgrading technology solutions as features or functionality is added, so that each company always has the

latest and greatest tech, without any spikes in monthly expense. Not to mention, in a cloud services environment, additional technology can be added or reduced to adjust for seasonal sales cycles or as a company's office size needs shift, the technology can mirror that expansion or contraction. In other words, it provides more tech when you need it, less expense when you don't.

"Much like Apple's iPhone users who regularly receive software updates, speed improvements and other optimizations, simply by pressing a button without incurring an additional expense, SMBs can enjoy upgrades, new software improvements, add-ons and enhanced security simply by working within our Cloud

Workspace," added Mr. Frink. "The overall goals of technology are to increase competitive advantage and to reduce overall cost and the migration from on-premise to cloud services, is the most sensible step in that direction."

About Northeast Information Systems

For over 45 years and 3,000 customers, Northeast Information Systems has been the right choice for business technology solutions in Upstate NY & Vermont. The company's primary focus is to leverage advanced voice, data and video technologies to improve our customer's business processes resulting in greater profitability, improved security

and increased customer satisfaction. Northeast Information Systems employs leading edge products from tier one manufacturers to design cost effective solutions backed by Factory Certified technical support.

The company's local dispatch center delivers round the clock service to ensure system reliability with guaranteed emergency service response within 2 hours. Northeast Information Systems does business throughout New York, Vermont and nationwide via our network of authorized distributors.
